

Aureom.AI

Corporate Bitcoin Treasury Policy & Founding Resolution

Effective Date: 28/05/2026

Version: 1.0

1. Purpose

This document establishes the foundational policy for the management of a corporate treasury in Bitcoin by **Aureom.AI** ("the Company").

The purpose of maintaining a Bitcoin treasury reserve is to:

- Preserve long-term purchasing power through exposure to a digitally native, non-sovereign monetary asset
- Diversify treasury reserves beyond conventional fiat currency dependence
- Align with the Company's strategic focus on artificial intelligence, financial systems, computational infrastructure, and digital capital formation
- Enable future optionality in global settlement, capital mobility, and digitally native financial operations

Aureom.AI recognizes Bitcoin as an emerging reserve asset within an increasingly automated, digital, and computational global economy.

2. Treasury Mandate

Aureom.AI hereby authorizes the establishment of a Bitcoin-denominated corporate treasury reserve as a permanent component of its broader treasury and capital allocation strategy.

The treasury shall operate according to the following principles:

Capital Preservation First

The primary objective shall be the preservation of long-term corporate purchasing power.

Strategic Reserve Discipline

Bitcoin holdings shall be treated as strategic treasury reserves rather than speculative trading positions.

Security by Design

Treasury systems shall prioritize institutional-grade custody, redundancy, and operational resilience.

Transparency & Auditability

Treasury reserves shall remain internally verifiable and subject to secure audit and reporting procedures.

3. Treasury Allocation Policy

The Company may allocate capital to Bitcoin under the following framework:

- **Initial Allocation:** Determined through founding resolution or board authorization
- **Ongoing Allocation Range:** Up to a board-approved proportion of liquid corporate reserves
- **Periodic Rebalancing:** Permitted solely through formal treasury approval mechanisms

No leverage, derivatives, synthetic instruments, or speculative borrowing arrangements shall be employed without explicit board authorization.

The treasury mandate prioritizes long-term capital durability over short-term market speculation.

4. Custody & Security Framework

4.1 Custody Structure

Bitcoin reserves shall be maintained through a multi-layer institutional custody model, including:

- Cold storage (offline private key custody)
- Multi-signature wallet structures requiring **2-of-3** or **3-of-5** authorization thresholds
- Segregation of operational liquidity wallets from long-term treasury reserves

4.2 Security Standards

The following standards shall apply:

- Private keys shall never be stored in plaintext on internet-connected systems
- Hardware wallets or hardware security modules (HSMs) shall be used for authorization and signing
- Treasury access shall be restricted through role-based authorization systems
- Geographic distribution of key shares is recommended to strengthen resilience and disaster recovery

4.3 Treasury Wallet Designation

The Company designates the following Bitcoin address as a public treasury receiving address for capital contributions, reserve allocations, or treasury transfers:

Treasury Address (BTC):

bc1q0qpaxk9rmqt54fm7u8nej7d8ax5s3575rc0ryx

Note: Treasury addresses may be rotated or replaced as part of evolving custody architecture, subject to formal internal recordkeeping.

5. Governance Structure

5.1 Treasury Authority

Strategic oversight and operational control of the Bitcoin treasury shall be exercised by:

- Chief Executive Officer (CEO)
- Chief Financial Officer (CFO) or equivalent financial authority
- Treasury Committee (where established)

5.2 Approval Requirements

Formal authorization shall be required for:

- Acquisition or disposal of Bitcoin exceeding internal thresholds
 - Material changes to custody architecture
 - Transfers between cold storage and operational liquidity wallets
 - Use of treasury Bitcoin for operational expenditure or financing purposes
-

6. Accounting & Reporting

Aureom.AI shall:

- Record Bitcoin holdings as corporate balance sheet assets
- Maintain acquisition cost basis records for treasury accounting purposes
- Monitor unrealized gains and losses in accordance with applicable accounting standards, including **IFRS** or **UK GAAP**, where relevant
- Conduct internal treasury reconciliation no less than quarterly

External audits may be commissioned at board discretion or regulatory necessity.

7. Risk Management Policy

The Company recognizes the following principal risks associated with digital reserve assets:

- Market volatility risk
- Custody and key management risk
- Regulatory and jurisdictional uncertainty
- Liquidity limitations during adverse market conditions

Mitigation measures may include:

- Distributed custody arrangements
- Conservative treasury allocation limits

- Multi-signature authorization requirements
- Periodic internal security reviews and resilience testing

Treasury risk shall be managed with an emphasis on continuity, resilience, and long-term preservation of corporate capital.

8. Compliance & Legal Considerations

Aureom.AI shall comply with all applicable legal and regulatory obligations in its jurisdictions of operation, including but not limited to:

- Anti-money laundering (AML) obligations
- Know-your-customer (KYC) requirements where applicable
- Tax reporting obligations for digital assets
- Corporate disclosure and governance standards

Bitcoin holdings shall be treated as corporate property and remain subject to fiduciary obligations owed by directors and authorized officers.

9. Strategic Rationale Statement

Aureom.AI adopts Bitcoin as a treasury reserve asset in recognition of:

- The emergence of digitally native monetary systems
- The growing importance of decentralized financial infrastructure
- The need for globally portable and censorship-resistant reserve capital within AI-native and increasingly automated markets
- The convergence of software systems, computational infrastructure, and programmable finance

The Company views Bitcoin not merely as an asset, but as a strategic reserve instrument for an increasingly digital and intelligent economy.

This policy is intended to evolve alongside technological, financial, and regulatory developments.

10. Amendment Clause

This document may be amended only through:

- Formal board resolution; or
- Unanimous consent of authorized treasury signatories where delegated authority exists

All amendments shall be documented, version-controlled, and retained within Company governance records.

11. Founding Resolution

By adoption of this document, **Aureom.AI** formally establishes a Bitcoin treasury framework as a permanent component of its corporate financial architecture and long-term capital strategy.

The Company affirms its commitment to disciplined treasury management, technological resilience, and prudent stewardship within an increasingly digital financial environment.
