ACQUISITION AND OPERATING PROPOSAL / ACJ-01

AC30 Grand Cruiser
The charter business case

American Canal Journeys | Proposed single-vessel, professionally crewed luxury charter operation

A private floating residence, offered by the whole boat.

Acquire and adapt one AC30 for six-guest, six-night charters with a professional captain and chef / host. Focus on a surveyed protected-water home base and a repeatable local itinerary, not on an unbuilt transcontinental canal network.

ILLUSTRATIVE INVESTMENT	BASE CASE
Delivered acquisition and launch funding	$6.30m, including $450,000 opening liquidity
Funding assumption	$1.00m vessel loan + $5.30m equity
Steady bookings / opening-price rate	22 weeks per year / $60,000 per whole-boat charter
10-year pre-tax equity IRR	-3.34%

Independent concept based on the AC30 design series. The boat is not represented as an available, certified product. Prices, demand, operating costs, funding and resale values are illustrative. Operating profitability does not establish recovery of purchase capital.

01 / INVESTMENT DECISION

Make acquisition conditional on demand and certification

Create a single-vessel charter business selling private family and small-group journeys, with high-quality accommodation, dining and a quiet onboard workspace. The AC30 gives the brand a distinctive home-like product, but its proposed $4.95m base purchase price creates a demanding investment case.

Decision measure	Base / comparison
Total initial funding	$6.30m; includes upgrades, conversion, taxes and liquidity
Reference steady charter revenue	$1.32m at 22 weeks x $60,000, before commission
Reference steady EBITDA	$392,000 at opening-price costs
Cash after annual renewal provision	$292,000 before debt service
10-year asset / equity IRR	-1.58% / -3.34%
Higher-demand case	28 steady weeks at $70,000 opening rate: 8.82% equity IRR
Selected investor hurdle	8% nominal pre-tax; an appraisal input, not a guaranteed return

Recommendation

Do not authorize an unconditional purchase at the concept price on the base assumptions. Progress a conditional purchase agreement only after route and charter approvals, yard conversion pricing, a commercial insurance offer and independent broker evidence supporting the higher-demand case or a lower acquisition cost.

The proposal is viable as a commercial venture only if its realized rate, utilization and cost control support the required return. Personal enjoyment or owner use can justify a lifestyle purchase, but is not charter revenue and is excluded from the model.

02 / PRODUCT AND CHARTER CONFIGURATION

Six guest berths are not six berths plus crew

Existing AC30 concept	Charter interpretation
Dimensions	30.0 m long; 7.5 m beam; 1.6 m design draft; 7.8 m transit air draft
Guest accommodation	Target three guest cabins, six guest berths; verify privacy, bathrooms and escape
Public spaces	Main saloon, full kitchen, foredeck, upper lounge / library and home office
Propulsion concept	Twin 75 kW electric drives; 500 kWh battery target, not a validated endurance
Selected options	$60k solar roof + $25k office + $95k inter-deck lift
Required new layout	A separate two-berth crew cabin and crew facilities, without displacing the six guest berths
Commercial adaptation	$180k provisional conversion allowance; actual quote and naval-architecture design required

The original brochure shows six berths in total and does not establish separate crew quarters. Retaining six guest berths plus two crew berths is a design condition, not an existing feature. If it cannot be achieved within the safe envelope, reduce guest capacity and rerun pricing or reject the purchase. [1]

The accessibility lift is an optional feature, not evidence of vessel-wide accessibility compliance. Its location, escape arrangements, stability effect and power demand must be reviewed. Top-deck crowds, stairs and lower cabins also require a proper commercial safety design.

No ocean capability, unlimited bridge fit, passenger certificate or national cruising permission is implied by the AC30 concept image.

03 / HOME BASE AND ITINERARY

Sell an operating area that the vessel can reach

Choose one U.S. protected-water homeport with suitable depths, bridge openings, commercial berths, emergency access and dependable shore charging. No base has been selected or approved in this proposal. Site selection and an authorized local operating area are acquisition conditions.

The bridge constraint is material

The AC30 air-draft target is 25.6 ft. New York State Canals publishes 21 ft on the Waterford-Oswego route, 17 ft on Champlain, 16 ft on Cayuga-Seneca and 15.5 ft on western Erie. Those published route clearances are below the AC30 target, so do not market it for through cruising on those routes without a verified redesign and current route review. [2]

Illustrative six-night format	Guest proposition, subject to route approval
Arrival day	Homeport embarkation, safety briefing and welcome dinner
Days 2-3	Short approved-waterway cruises with local cultural or dining stops
Day 4	A quiet waterside stay: office / retreat use and optional licensed local guides
Days 5-6	Additional short cruise and return toward the homeport; weather reserve built into itinerary
Departure day	Disembarkation and full turnaround before the next charter

This is a product template, not a navigation plan. No distance, speed, waterway, offshore leg or bridge passage is promised. The future American Canal Network is an optional long-term opportunity and contributes no revenue or resale premium to this case.

At 150 kW total rated propulsion, a nominal 500 kWh battery gives only 3.3 hours at full propulsion power before losses, reserve or hotel loads. Actual duty-cycle trials, usable energy, charging compatibility and emergency arrangements must set each day’s cruising plan.

04 / TARGET CUSTOMER AND RATE STRATEGY

Sell exclusivity and service, not beds by the night

Target affluent U.S. families, multigenerational groups and small private retreats seeking an entire staffed vessel. Use three guest cabins for one booking, avoiding mixed-party cabin sales in the initial model. The office supports work-from-water stays, but no connectivity coverage is guaranteed.

Proposed rate card	Whole boat, up to six guests
Shoulder departure	$55,000 for six nights
Regular departure	$60,000 for six nights
Peak departure	$65,000 for six nights
Base financial input	$60,000 blended opening rate, not a claimed achieved price
Higher-demand scenario	$70,000 blended premium rate; requires a separately validated package / pricing case
Standard inclusions	Crew, onboard meals, ordinary onboard activities and modeled normal operating inputs
Excluded customer charges	Applicable customer taxes, gratuities, premium alcohol and separately purchased excursions

Published market context

European Waterways lists 2026 whole-barge prices for six passengers of $35,000 for Nymphea and $45,300-$52,900 for Anjodi. These are European product references, not equivalent U.S. demand, operating costs or proof that an AC30 can sell at $60,000-$70,000. Duration, inclusions and booking terms must be compared directly. [3-4]

The base six-person rate is equivalent to $10,000 per guest per six-night charter when all six berths are used. Small groups still pay for the whole boat. Validate willingness to pay with specialist brokers before accepting the acquisition economics.

05 / PURCHASE AND SETUP BUDGET

Allow for a commercial vessel, not only the hull price

Initial use of funds	US$000	Basis
AC30 concept base vessel	4,950	Original illustrative brochure; not a yard quotation
Solar roof	60	Published concept option
Home-office fit-out	25	Published concept option
Accessibility lift	95	Published concept option
Commercial fit-out / separate crew cabin	180	New allowance; crew cabin, safety and charter adaptation
Delivery and commissioning	90	Transport, delivery checks and acceptance
Survey, legal, documentation and finance fees	75	Includes assumed $10k lender fee within this total
Launch, linen and guest inventory	75	Photography, linens, tableware and initial stock
Purchase / use tax provision	300	Placeholder amount; actual tax treatment to be confirmed
Opening working liquidity	450	Operating cash buffer; separate from customer deposits
TOTAL	6,300	All initial uses at commercial delivery in the model

Options selected total $180,000. The extra 250 kWh battery option is not selected; add its $250,000 concept cost and review weight, stability and charging if trials show it is necessary. [1]

The $300,000 tax provision is an amount, not a statement of any jurisdiction’s rate. The $180,000 conversion budget may not cover the eventual certification or battery-system requirements. Obtain a delivered commercial specification and fixed scope before paying a non-refundable deposit.

The model assumes a commissioned vessel is acquired at time zero. It does not finance years of yard progress payments, construction interest or delayed delivery. A real newbuild procurement requires a separate build-period funding and refund-security plan.

06 / FUNDING AND OWNERSHIP

Use modest debt and committed startup liquidity

Funding source	US$000	Illustrative terms
Private equity	5,300	Owner / investors; no capital commitment exists
Vessel finance	1,000	8% fixed assumption, subject to lender agreement
TOTAL	6,300	Debt is 15.9% of total funded uses

The modeled loan pays interest only in operating years 1-2, then amortizes over ten annual payments starting in year 3. That gives a 12-year legal repayment schedule. The assumed year-10 vessel sale repays the remaining balance; it is not a fully repaid loan at exit.

Debt / liquidity item	Model value
Annual interest-only payment, years 1-2	$80,000
Annual scheduled payment from year 3	$149,029
Debt remaining after year-10 payment	$265,759
Opening operating liquidity	$450,000
Lowest base-case year-end liquidity	$294,000 in year 1
Distribution policy	Retain / restore the $450k liquidity target before owner distributions

The first year has negative operating cash before debt, so debt service is met partly from funded liquidity. A lender must explicitly accept the startup plan; no covenant waiver, credit approval, insurance assignment or security valuation is assumed. The liquidity account is not a substitute for sustainable future cash flow.

Use a vessel-owning entity and licensed charter operator / manager under reviewed contracts. Ownership and documentation must be eligible for the intended U.S. trade. Customer deposits remain liabilities, not acquisition equity or freely spendable profit.

07 / CREW AND OPERATIONS

Budget a professional service and relief cover

Annual fixed operating cost	Opening-year US$000
Crew and employment costs	270
Commercial insurance	80
Base berth and utilities	70
Routine maintenance	120
Administration / accounting	45
Marketing and content	35
TOTAL FIXED OPERATING COST	620

Crew budget: captain $110k; chef / host $85k; relief and extra handling $30k; employer costs, benefits and training $45k. This is a staffing-cost assumption, not a salary quotation. BLS reports a May 2025 median of $92,460 for captains, mates and pilots of water vessels; it is broad occupational context, not a luxury-charter crew budget. [5]

The two-person crew is a provisional service model. A 30 m multideck vessel may need additional personnel for safe mooring, navigation, passenger assistance or rest. Confirm manning with the captain, competent advisers and applicable authority, then adjust costs if necessary.

Other operating input	Assumption
Booking / broker commission	15% of charter hire on every booking, including direct sales as a conservative blended budget
Variable charter cost	$5,000 per sold week for provisions, energy, laundry, turnaround and consumables
Annual renewal provision	$100,000 in year 1, separate from $120k routine maintenance
Escalation	2.5% annually on charter rates, fixed costs, variable unit costs and renewal provision

Renewal covers a modeled allowance for battery, hotel fit-out and major systems over time. It is treated as spent / committed annually, not an additional cash balance released at sale. Neither energy consumption nor insurance is independently quoted.

08 / UTILIZATION AND SELLING PROGRAMME

Measure sold departures, not full-boat berth occupancy

Operating year	Marketed weeks	Sold weeks	Utilization of marketed weeks
1	40	14	35%
2	40	18	45%
3-10	40	22	55%
Higher-demand case, steady	40	28	70%

Each booking is six nights plus a turnaround window. Forty marketed departures leave twelve calendar weeks for maintenance, crew training, repositioning, weather and schedule restrictions. This availability itself requires route and staffing validation. No personal owner-use weeks are included.

At 22 sold weeks the vessel serves up to 132 whole-boat charter nights, or 792 guest bed-nights if all six berths are occupied. That is not a separate per-cabin revenue stream. The model sells the whole boat regardless of party size.

Sales plan

Use specialist crewed-charter and hotel-barge brokers, a polished direct-booking site, travel advisers and private-retreat organizers. Commissioned production photography and an accurate onboard tour should explain space, inclusions and approved cruising area. All revenue channels remain subject to the modeled 15% commission allowance.

Require a documented forward pipeline: price-qualified inquiries, deposits under approved terms, cancellation patterns and broker conversion evidence. Count only realizable net hire; avoid treating refundable reservations as certain occupancy or cash profit.

No event-charter, day-trip or dockside-hotel revenue is included. Such products may trigger different permits, occupancy, insurance and operating constraints and should be appraised separately.

09 / UNIT ECONOMICS AND BREAK-EVEN

Positive cash operation does not recover the purchase price

Reference steady year at opening prices	US$000
Gross hire: 22 x $60k	1,320
Commission: 15%	(198)
Variable costs: 22 x $5k	(110)
Fixed operating costs	(620)
EBITDA before renewal provision	392
Renewal provision	(100)
CFADS before debt service	292
Scheduled debt service from year 3	(149.03)
Reference residual before liquidity policy	142.97

At a $60,000 opening rate, each sold week contributes $46,000 after commission and variable costs. This contribution must pay annual fixed costs, renewal and debt. These reference values exclude escalation; the actual year-3 nominal projection is higher.

Break-even test at opening prices	Minimum full sold weeks
Fixed operating costs only	14
Fixed costs + renewal	16
Fixed costs + renewal + scheduled debt	19
Same costs with 1.30x debt coverage	20

These are operating thresholds, not an 8% investment-return threshold. They do not repay the initial equity through a separate charge for capital, and they exclude tax.

10 / TEN-YEAR CASH-FLOW FORECAST

A full purchase-to-sale view

Year	Weeks	Gross hire	EBITDA	CFADS	Debt pay	Owner cash	Liquidity
1	14	840.0	24.0	-76.0	80.0	0.0	294.0
2	18	1107.0	213.2	110.7	80.0	0.0	324.7
3	22	1386.8	411.8	306.8	149.0	32.5	450.0
4	22	1421.5	422.1	314.5	149.0	165.4	450.0
5	22	1457.0	432.7	322.3	149.0	173.3	450.0
6	22	1493.5	443.5	330.4	149.0	181.3	450.0
7	22	1530.8	454.6	338.6	149.0	189.6	450.0
8	22	1569.1	466.0	347.1	149.0	198.1	450.0
9	22	1608.3	477.6	355.8	149.0	206.7	450.0
10	22	1648.5	489.6	364.7	149.0	2751.1	450.0

All amounts US$000. Year-10 owner cash includes net vessel-sale proceeds less outstanding loan, plus remaining liquidity. Years 1-2 distribute no cash because operating receipts and funded liquidity must support startup costs and debt. In year 3, surplus first restores liquidity to $450k before distribution.

Exit assumption	Base case
Gross sale value in year 10	$2.475m: 50% of original $4.95m base-vessel price, in nominal dollars
Sale transaction cost	5% of gross sale value
Net sale proceeds before debt	$2.351m
Debt repaid at exit	$265,759
Liquidity returned	$450,000 if retained and available as modeled
Asset residual / capital gain	No price appreciation assumed; options do not add separate resale proceeds

The 50% residual is not a valuation or guaranteed buyback. A new boat type with unproven battery systems, high air draft and few comparable buyers may sell for less. The model excludes taxes, depreciation benefits and investor fees.

11 / RETURNS AND ACQUISITION HURDLE

The base case is a weak financial investment

Return measure	Calculated result
10-year unlevered asset IRR	-1.58%
10-year equity IRR	-3.34%
All-equity purchase IRR	-1.58%
Higher-demand equity IRR	8.82%
Selected appraisal hurdle	8% nominal pre-tax, not a market commitment
Base-ramp rate needed for 8% equity IRR	$85,896 per six-night charter at opening prices
Higher-demand ramp rate needed for 8%	$68,386 at 28 steady sold weeks

Interpretation

The base operation can generate recurring cash after startup, but it does not compensate for the initial purchase cost and modeled depreciation over a ten-year hold. Borrowing at 8% worsens equity IRR because asset returns are lower than the borrowing cost. More leverage is not a cure.

The higher-demand case reaches 8.82% equity IRR by assuming 18, 24, then 28 sold weeks at a $70k opening blended rate. That is an ambitious commercial case, not a forecast. The required $68.4k rate at that occupancy is near its $70k assumption; cost or demand slippage can erase the margin.

At base occupancy the required $85.9k opening rate exceeds the proposed $55k-$65k rate card. Do not simply relabel that required rate as a market price. Test a lower delivered vessel cost, a more productive layout, a different boat or a lease / management arrangement before proceeding.

12 / SENSITIVITIES

Test both income and capital loss

Scenario	Equity IRR	Extra equity calls
Base: $60k / 22 steady weeks	-3.34%	$0
Downside: $50k / 18 steady weeks	-15.04%	$1,860,138
Upside: $70k / 28 steady weeks	8.82%	$0
Fixed costs +20%	-7.21%	$0
Resale only 30% of base vessel price	-6.43%	$0
Year-6 extra refit $250k	-3.97%	$0
Acquisition +10% excluding liquidity	-4.45%	$0
All-equity purchase	-1.58%	$0

Definitions

Base: 14 / 18 / 22 sold weeks, $60k opening rate. Downside: 10 / 14 / 18 weeks at $50k. Upside: 18 / 24 / 28 at $70k. Each pattern keeps its steady level from year 3 onward. Rates and unit costs escalate 2.5% annually in every case.

Fixed-cost stress adds 20% to the $620k annual fixed budget. Resale stress reduces gross year-10 resale to 30% of the original $4.95m vessel price. Refit stress adds $250k in year 6 above the annual renewal provision. Acquisition stress adds 10% to $5.85m initial uses excluding the liquidity account; resale does not increase.

The downside exhausts the funded cash buffer and requires approximately $1.86m of additional owner cash over the hold. Its IRR assumes those calls are met. Without committed additional funds, the business could default or cease trading; there is no assumed revolving credit facility.

Scenarios are not probabilities. A combined insurance, weather, maintenance and demand shock can be worse. The base purchase remains conditional even though its operational break-even is below 22 weeks.

13 / LEGAL, CREW AND INSURANCE GATES

Classify the operation before selling departures

The proposal is a professionally crewed charter: the owner / operator supplies crew. It is not modeled as a demise or bareboat rental. A nominal bareboat agreement must not be used to evade the rules while the owner controls the crew or voyage. [6]

Gate	Required determination
Passenger classification	Ask the relevant USCG marine-safety authority to determine the applicable category, tonnage basis, inspection requirements and operating area.
Tonnage and credentials	U.S. gross tonnage is a regulatory volume measure, not vessel weight. A 30 m boat cannot be assigned an OUPV / six-pack treatment merely from its guest count.
Crew and guest capacity	Approve six guests plus actual crew and any other persons; verify stability, escape, lifesaving, fire protection and safe manning.
U.S. trade eligibility	Confirm build, ownership, documentation and coastwise eligibility for the exact service with maritime counsel / relevant authorities.
Commercial insurance	Obtain hull, passenger liability, crew / employer, pollution and battery-related coverage with the actual charter route and use declared.
Consumer / tax / port rules	Review booking terms, cancellation rights, applicable taxes, liquor / food service, marina permissions and local business requirements.

Title 46 uses different passenger thresholds depending on statutory tonnage and charter form. Six guests is the commercial capacity assumption here, not a blanket exemption from inspection or a guarantee that a particular captain’s credential suffices. [7-8]

CBP explains coastwise passenger restrictions; domestic transport may require an appropriately qualified U.S. vessel and ownership structure. No waiver, exemption or foreign-built vessel eligibility is assumed. [9]

14 / BOOKING AND OPERATING CONTROLS

Protect liquidity, service quality and the asset

Control	Proposed policy
Reservations	Use reviewed deposits and final-payment terms. Hold refund exposure separately from available operating cash.
Guest counts	One party of no more than six authorized guests; do not add paying day visitors or non-paying guests beyond the approved persons limit.
Weather / route alternatives	Offer agreed sheltered or dockside alternatives only when legally permitted and properly insured; disclose cancellation / refund rules.
Maintenance	Keep service logs, battery monitoring, condition inspections, planned haul-outs and an independent annual maintenance budget.
Energy plan	Confirm compatible chargers and berths, hotel-load budget, safe usable battery capacity and contingency towing / refuge arrangements.
Financial reporting	Track realized net rate, sold weeks, refund liabilities, commission, contribution per charter, maintenance and cash available.
Distributions	Restore the $450k working cash target before owner drawings, subject to loan terms and solvency.
Owner use	Any personal use consumes saleable capacity; cost it separately and remove it from charter projections.

Crew need a service manual covering food standards, housekeeping, guest assistance and incident escalation. Upper deck and lower cabins make passenger management particularly important; attractive renderings do not establish a safe or accessible commercial arrangement.

The annual plan must retain time and funds for technical downtime. Do not sell a continuous 52-week itinerary on a vessel whose crew rest, charge cycle and maintenance needs have not been measured.

15 / ACQUISITION EXECUTION

A staged commitment to a single-vessel pilot

Stage	Decision evidence
1. Concept diligence	Resolve manufacturer status, intellectual property, build location, yard capability and a deliverable commercial specification.
2. Vessel / route survey	Verify crew cabin, stability, regulatory tonnage, inspections, charging and a suitable operating area / homeport.
3. Commercial test	Obtain broker assessments, comparable inclusions, price-qualified leads and a credible premium booking pipeline.
4. Firm quotations	Delivered vessel and options; commercial insurance; berth and power; crew and relief; maintenance and conversion.
5. Funding and contract	Negotiate conditional purchase, survey / acceptance rights, title, warranties, lender terms, tax treatment and working cash.
6. Acceptance and launch	Complete trials, approvals, training, emergency procedures and a small number of controlled inaugural charters.
7. Review before expansion	Compare actual realized contribution and costs with plan; do not order a second vessel until the first proves demand.

Go / no-go test

Approve purchase only when the verified model meets the investor hurdle with an acceptable downside liquidity requirement. Under the assumptions shown, that needs something close to the higher-demand case or a material cost reduction. A broker’s enthusiasm alone is not underwriting evidence.

A management-only pilot using a compliant third-party vessel could test service and demand with less acquisition exposure. It requires its own contract and economics and is not booked as AC30 revenue in this proposal.

APPENDIX A / MODEL ASSUMPTIONS

A reproducible annual cash-flow method

Item	Model treatment
Currency / timing	US$000; initial purchase and launch cash at time 0; year-end annual flows for ten operating years.
Escalation	2.5% per year from opening-year rates and unit costs; no separate price-volume double count.
Bookings	Base 14, 18, then 22 whole-boat charters; 40 marketed departures annually.
Revenue	Sold weeks x opening $60k rate x annual escalation factor.
EBITDA	Revenue less 15% commission, variable $5k/week and $620k fixed opening-year costs, all relevant costs escalated.
CFADS	EBITDA less $100k escalated annual renewal provision.
Debt	1,000 at 8%; two interest-only years; ten-year annuity begins year 3; outstanding loan repaid on sale.
Liquidity	450 funded initially. Negative residual draws cash; surplus replenishes target before distributions. Extra deficits require additional equity.
Exit	Year 10: gross resale 50% of original $4.95m base vessel, less 5% selling costs, debt repayment; return actual remaining liquidity.
Returns	Annual IRR with time-zero equity of 5,300; asset comparator uses 6,300 and no borrowing. All nominal and pre-tax.

No tax deductions, depreciation benefits, investment credits, interest tax shield, grants, owner enjoyment, appreciation, refinancing proceeds or new-network availability are assumed. Surveyed energy consumption, actual operating restrictions and insurer exclusions are not yet known.

Rounding may affect printed subtotals. The calculation uses full precision and verifies funding sources / uses and the debt balance. Neither the business assumptions nor the financial model has been independently audited.

APPENDIX B / DETAILED CASH CONTROLS

Operating profit, liquidity and sale proceeds

Year	Renewal	Interest	Principal	Debt close	Cash before exit*	Owner cash
1	100.00	80.00	0.00	1000.00	294.00	0.00
2	102.50	80.00	0.00	1000.00	324.70	0.00
3	105.06	80.00	69.03	930.97	450.00	32.45
4	107.69	74.48	74.55	856.42	450.00	165.42
5	110.38	68.51	80.52	775.90	450.00	173.28
6	113.14	62.07	86.96	688.95	450.00	181.34
7	115.97	55.12	93.91	595.03	450.00	189.60
8	118.87	47.60	101.43	493.60	450.00	198.07
9	121.84	39.49	109.54	384.06	450.00	206.74
10	124.89	30.73	118.30	265.76	450.00	2751.13

All amounts US$000. *Liquidity is shown before its year-10 return. Year-10 owner cash includes ordinary distributions plus $2,351.25k net sale proceeds, minus $265.76k outstanding loan, plus $450k liquidity. The loan principal is not deducted twice.

Return calculation

Equity IRR is the rate r for which the sum of annual equity cash flow divided by (1 + r) raised to the year equals zero, including the initial negative $5.30m. Asset IRR uses the same operating and resale assumptions without borrowing and starts at negative $6.30m.

A positive EBITDA or a positive distribution in an individual year can coexist with a negative IRR: the initial purchase is large and the assumed asset loses value. The cash-flow model therefore includes resale and the full purchase funding rather than only reporting a charter-profit margin.

The model assumes no owner-use days and no unpaid guest debts, refundable-deposit funding, casualty loss or operating interruption beyond the weekly utilization assumptions. Add any such costs or lost bookings before investment approval.

APPENDIX C / PRIMARY SOURCES

Product provenance and operating context

[1] AC30 Grand Cruiser shipbuilder showcase, independent concept, 8 November 2026
Open source - Original $4.95m base price, proposed dimensions, six berths, electric-drive targets and option prices.

[2] New York State Canals, Commercial Shipping and Towing
Open source - Published governing clearances; current notices and detailed bridge data remain necessary.

[3] European Waterways, Nymphea 2026 rates
Open source - Six-person whole-barge published price reference; European market only.

[4] European Waterways, Anjodi 2026 rates
Open source - Six-person whole-barge price reference; not evidence of achieved U.S. AC30 rates.

[5] U.S. Bureau of Labor Statistics, Water Transportation Workers
Open source - Broad occupational wages; not a quote for qualified luxury-charter crew.

[6] USCG, Coast Guard terminates illegal passenger vessel operation in Virginia waters
Open source - Crewed and bareboat distinctions; verify the applicable vessel-specific legal position.

[7] U.S. Code Title 46, passenger and uninspected passenger vessel definitions
Open source - Definitions distinguish statutory tonnage and passenger thresholds; obtain current legal review.

[8] USCG National Maritime Center, Charter Boat Captain
Open source - Credential type depends on experience, waters and tonnage; no AC30 credential classification is assumed.

[9] CBP, The Passenger Vessel Services Act, informed compliance publication
Open source - Coastwise passenger-trade context; exact service and eligibility need specialist determination.

Sources checked 8 November 2026. Source prices and laws are context, not endorsements or proof of commercial viability. All other financial and operational inputs are analyst assumptions. Cover image: AI-generated AC30 design-series interior cutaway, not a certified vessel layout.
